Don't know if its due to the usb or not cause I tried pci cards as well?? Or I just get bad luck with this as well?? Well if your got a PCI card with antennas on the back and have your PC blocking the signal between the router and those antennas in the back then yeah the signal is not going to be much better.. After I looked for solutions on the internet I found that because it is running on Live USB with persistence even after the update the kernel that Linux will boot on is the one from the downloaded ISO.. 9 0-kali 4-64 kernel version, then i downloaded the kernel headers without a problem and installed the lwfinger rtl8188eu driver peacefully and finally the router sprang to life.. Good luck ~ L Reply @L L, finally i got to know what the actual problem is, By typing uname -r, I see that Linux is booting on 4.. This works but i get 1frame per minute or less,i think that stdin its not threaded so its locking the app.. WiFi is a very variable monster Even the best equipment (on both router and PC) can only do so much If the distance is far enough apart with dense enough obstacles in the way.. I can use internet and surf on the web but now the problem is that when i try to put it in monitor mode by # airmon-ng start wlan0, there are some processes that need to be killed, but as soon as i kill those processes my router turns off. 0041d406d9 [Read book Complete dentures by Robert M Morrow; John E Rhoads; Kenneth D Rudd MOBI, DJV, AZW3](#)
